

# European Foundational Body of Knowledge for the ICT Profession (ICT BoK)

## DRAFT v1 for ICT BoK EXPERT NETWORK REVIEW – 26 October 2020 ICT BoK overview & Knowledge Units (KUs) full description

KNOWLEDGE DOMAINS	1. Transversal knowledge	2. Behavioural Knowledge	3. Architecture	4. Networks	5. Software	6. Data	7. Business
<b>KNOWLEDGE UNITS</b>							
(1) Accessibility [T1]							
(2) Application Software							
(3) Business processes							
(4) Collaboration							
(5) Communication							
(6) Data analytics							
(7) Data communication							
(8) Data management							
(9) Digitalisation							
(10) Documentation							
(11) Enterprise architecture							
(12) Ethics [T2]							
(13) ICT governance							
(14) ICT and society							
(15) ICT Infrastructure							
(16) ICT in organisations							
(17) ICT legal issues [T3]							
(18) ICT project management							
(19) ICT Quality							
(20) ICT risk management							
(21) ICT strategy							
(22) Information analysis							
(23) Information planning							
(24) Information systems development & implementation							
(25) Knowledge and information management							
(26) Leadership							
(27) Networks and network services							
(28) Organisation principles							
(29) Privacy [T4]							
(30) Problem solving							
(31) Programming languages							
(32) Programming principles							
(33) Requirements analysis and specifications							
(34) Security [T5]							
(35) Service delivery and support							
(36) Software design							
(37) Sourcing							
(38) Sustainability [T6]							
(39) System administration							
(40) System Software							
(41) Testing							
(42) Usability [T7]							
(43) User interface and web design							

UNIT NAME	ACCESSIBILITY [T1] (1)			
<b>Unit description</b>	<p>The Accessibility knowledge unit concerns knowledge about the extent to which the design of products, devices, services or environments are usable by all, irrespective of personal capacities. It relates to the extent to which products, systems, services, environments and facilities may be used by people with the widest range of characteristics and capabilities to achieve specified goals.</p> <p>Accessibility is a transversal aspect relevant to all ICT professional activities.</p>			
<b>Common Knowledge</b>	<p>This unit incorporates cross-cutting knowledge directly related to the e-CF transversal aspect, 'T1 – Accessibility'. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation and wider society, including the following topics:</p> <ul style="list-style-type: none"> <li>• The general principles of accessibility and the reasons for ensuring digital accessibility</li> <li>• An understanding of the level of compliance required by public bodies with WCAG guidelines</li> <li>• General methods for generating and managing accessible digital information</li> </ul>			
<b>Tags for views</b>	<p><b>Knowledge Domain</b></p> <p>1. Transversal knowledge</p>	<p><b>EN16234-1 e-CF area(s)</b></p> <p>A. PLAN B. BUILD</p>	<p><b>EN16234-1 e-CF Competence(s)</b></p> <p>A.6. Application Design B.1. Application Development A.10 User Experience</p>	<p><b>ICT Professional Role Profile(s) CWA16458-1</b></p> <p>Developer Role (6) Digital Media Specialist Role (7)</p>
<b>Base Knowledge</b>	<p>ICT professionals specialising in this field should have knowledge that includes the following topics:</p> <ul style="list-style-type: none"> <li>• ICT accessibility standards and guidelines</li> <li>• Principles of accessibility, Universal Design and Accessible Design</li> <li>• Content editing and postproduction of accessible texts and multimedia</li> <li>• Relevant tools and technologies (e.g. assistive technologies, publication tools)</li> <li>• Accessibility evaluation tools and checks</li> <li>• Behavioural science principles</li> <li>• Human-computer interaction principles</li> </ul>			
<b>Specialised Knowledge</b>	<p>More in-depth knowledge of the accessibility is articulated in specialised frameworks, standards, international and national guidelines and regulations.</p>			
<b>References</b>	<ul style="list-style-type: none"> <li>• prEN XXXX:XXXX ICT accessibility competences — Guidelines for a more inclusive ICT</li> <li>• ISO/IEC 40500: Information technology — Web Content Accessibility Guidelines (W3C-WCAG)</li> <li>• ISO/IEC 29138: Information technology — User interface accessibility</li> <li>• ISO/IEC 30071: Information technology — Development of user interface accessibility <a href="https://www.iso.org/standard/70913.html">https://www.iso.org/standard/70913.html</a></li> <li>• ISO 9241: Ergonomics of Human System Interaction – part 151: Guidance on World Wide Web user interfaces – part 171; Guidance on software accessibility</li> <li>• ETSI EN 301 549: Accessibility requirements for ICT products and services</li> <li>• WAMDIA reports <a href="https://wamdia.eu/en/">https://wamdia.eu/en/</a></li> <li>• European Accessibility Act, EU Web Accessibility Directive</li> </ul>			

UNIT NAME	APPLICATION SOFTWARE (2)			
<b>Unit description</b>	The Knowledge Unit Application Software contains knowledge about software designed to help users perform specific information processing tasks or activities. This can be in a variety of contexts, for example, the assistance of people while performing business activities, such as word processing or project management,			
<b>Common Knowledge</b>	<p>All ICT professionals should understand the fundamentals of application software as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics:</p> <ul style="list-style-type: none"> <li>• Concept of software as a series of instructions</li> <li>• Application software as one the major categories of software, compared to operating system software</li> <li>• Role of application software</li> <li>• Categories of application software and their different functions</li> <li>• Embedded software, web-based software</li> <li>• Examples of most widely used application software</li> </ul>			
<b>Tags for views</b>	<b>Knowledge Domain(s)</b>  3. Software	<b>EN16234-1 e-CF area (s)</b>  A. PLAN B. BUILD	<b>EN16234-1 e-CF Competence(s)</b>  A.6. Application Design B.6. Systems Engineering	<b>ICT Professional Role Profile(s) CWA16458-1</b>  Developer Role (6) Systems Analyst Role (20) Solution Designer Role (24)
<b>Base Knowledge</b>	<p>ICT professionals specialised in this field should have advanced knowledge in the following key topics:</p> <ul style="list-style-type: none"> <li>• Availability of application software, e.g. packaged, custom, web, open source, shareware, freeware, public domain</li> <li>• Features, functions, and possibilities of different types of application software</li> <li>• Characteristics of a user interface</li> <li>• Key features of widely used business programs, graphics and multimedia programs</li> <li>• Learning aids available for application software</li> </ul>			
<b>Specialised Knowledge</b>	More in-depth knowledge of application software is further articulated in specialised certifications.			
<b>References</b>	<ul style="list-style-type: none"> <li>• Supplier specific</li> </ul>			

UNIT NAME	BUSINESS PROCESSES (3)			
<b>Unit description</b>	The Business process knowledge unit concerns knowledge about organisation of work into business activities that are usually cross-functional and represent the steps required to achieve business objectives. The objective is to deliver organisational or customer value. It includes knowledge related to the flow and use of information and resources.			
<b>Common Knowledge</b>	<p>All ICT professionals should understand the fundamentals of business processes as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics:</p> <ul style="list-style-type: none"> <li>• Process thinking</li> <li>• Different types of business processes and their focus (e.g. primary, supporting, management)</li> <li>• Process models (e.g. Value chain, input-process-output model)</li> <li>• Basic process modelling techniques (e.g. flow charts, Gantt charts)</li> <li>• </li> </ul>			
<b>Tags for views</b>	<b>Knowledge Domain</b>  7. Business	<b>EN16234-1 e-CF area(s)</b>  A. PLAN E. MANAGE	<b>EN16234-1 e-CF Competence(s)</b>  A.1 IS and Business Strategy Alignment E.5. Process Improvement	<b>ICT Professional Role Profile(s) CWA16458-1</b>  Business Analyst Role (2) Enterprise Architect Role (8) ICT Operations Manager Role (10)
<b>Base Knowledge</b>	<p>ICT professionals specialising in this field should have knowledge that includes the following topics:</p> <ul style="list-style-type: none"> <li>• Process modelling, analysis and design</li> <li>• Process modelling techniques (e.g. PERT, BPMN)</li> <li>• Process performance management</li> <li>• Process improvement</li> </ul> <p>Business Process Redesign/Reengineering</p>			
<b>Specialised Knowledge</b>	More in-depth knowledge of business processes is further articulated in specialised BoKs, standards, and models.			
<b>References</b>	<ul style="list-style-type: none"> <li>• Association of Business Process Management Professionals Common Body of Knowledge® (ABPMP CBOK®)</li> <li>• Business Analysis Body of Knowledge (BABOK)(IIBA)</li> <li>• ISO/IEC 19510 IT – OMG Business Process Model and Notation</li> <li>• Value chain model (Porter)</li> </ul>			

UNIT NAME	COLLABORATION (4)			
<b>Unit description</b>	The Collaboration knowledge unit concerns knowledge related to working with others in common purpose to achieve mutual goals. It incorporates teamworking, networking with others, negotiation, and the avoidance and/or resolution of conflict.			
<b>Common Knowledge</b>	<p>All ICT professionals should understand the fundamentals of collaboration as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to working relationships and ICT in the organisation, including the following topics:</p> <ul style="list-style-type: none"> <li>• An understanding of a shared purpose</li> <li>• General principles of collaboration and basic models</li> <li>• General notion of issues in collaboration and teamwork (e.g. mediation, negotiation conflict handling, networking)</li> </ul>			
<b>Tags for views</b>	<b>Knowledge Domain</b>  2. Behavioural knowledge	<b>EN16234-1 e-CF area(s)</b>  E. MANAGE	<b>EN16234-1 e-CF Competence(s)</b>  D.8. Contract management E.2. Project and Portfolio Management E.4. Relationship Management	<b>ICT Professional Role Profile(s) CWA16458-1</b>  Account Manager Role (1) Project Manager Role (15) Service Manager Role (18) Devops Expert Role (26)
<b>Base Knowledge</b>	<p>ICT professionals specialising in this field should have knowledge that includes the following topics:</p> <ul style="list-style-type: none"> <li>• Networking and managing relationships</li> <li>• Mediation and negotiation</li> <li>• Conflict handling</li> <li>• Group dynamics, group thinking</li> <li>• Teamwork (e.g. types of teams, processes, relationships, roles, team building)</li> <li>• Models of collaboration and teamwork</li> </ul>			
<b>Specialised Knowledge</b>	More in-depth knowledge of collaboration is further articulated in specialised BoKs, standards, and models.			
<b>References</b>	<ul style="list-style-type: none"> <li>• ISO 44001: Collaborative business relationship management systems — Requirements and framework <a href="https://www.iso.org/standard/72798.html">https://www.iso.org/standard/72798.html</a></li> <li>• Digital Practitioner Body of Knowledge™ Standard (Context II: Team) (The Open Group) <a href="https://pubs.opengroup.org/dpbok/standard/DPBoK.html#the-BoK">https://pubs.opengroup.org/dpbok/standard/DPBoK.html#the-BoK</a></li> <li>• Models, such as: FNSP - Forming-Storming-Norming-Performing model (Tuckman), GRPI - Goals, Roles, Processes, Interpersonal relationships model (Rubin, Plovnick and Fry)</li> </ul>			

UNIT NAME	COMMUNICATION (5)			
<b>Unit description</b>	The Communication knowledge unit concerns knowledge related to the exchange of information, ideas, emotions, facts and concepts to another person or group of individuals. The unit incorporates the application of all communication media, including speech, writing and electronic transmission of information both formal and informal.			
<b>Common Knowledge</b>	All ICT professionals should understand the fundamentals of communication as articulated in the unit description. Each ICT Professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics: <ul style="list-style-type: none"> <li>• Basic principles of communication</li> <li>• Formal and informal communication</li> <li>• Professional written and oral communication</li> <li>• Listening techniques</li> </ul>			
<b>Tags for views</b>	<b>Knowledge Domain</b>  2. Behavioural knowledge	<b>EN16234-1 e-CF area(s)</b>  D. ENABLE	<b>EN16234-1 e-CF Competence(s)</b>  D.3. Education and Training Provision D.6. Digital Marketing	<b>ICT Professional Role Profile(s) CWA16458-1</b>  Account Manager Role (1) Digital Media Specialist Role (7) Digital Consultant Role (9) Digital Educator Role (13)
<b>Base Knowledge</b>	ICT professionals specialising in this field should have knowledge that includes the following topics: <ul style="list-style-type: none"> <li>• Communication models</li> <li>• Communication techniques</li> <li>• Oral communication (e.g. conversations, meetings, presentations)</li> <li>• Written communication for different types of reports and documents</li> <li>• Electronic communication (e.g. e-mails, text, social media)</li> <li>• Non-verbal communication through body language</li> <li>• Visualisations through graphs and charts</li> <li>• Different communication styles for different purposes and situations, people and media</li> </ul>			
<b>Specialised Knowledge</b>	More in-depth knowledge of communication is further articulated in specialised BoKs, and models.			
<b>References</b>	<ul style="list-style-type: none"> <li>• <a href="https://www.tcbok.org/">Technical Communication Body of Knowledge (TCBOK) (Society for Technical Communication (STC) https://www.tcbok.org/</a></li> <li>• Global Body of Knowledge standard for Public relations and Communication management (GBOK) (Global Alliance for PR and Communications)</li> <li>• Shannon-Weaver Model of Communication</li> </ul>			

UNIT NAME	DATA ANALYTICS (6)			
<b>Unit description</b>	The Knowledge unit Data Analytics contains knowledge about appropriate analytics and statistical techniques on available data to discover new relations and deliver insights into research problem or organizational processes and support decision-making.			
<b>Common Knowledge</b>	<p>All ICT professionals should understand the fundamentals of Data Analytics as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics:</p> <ul style="list-style-type: none"> <li>• Business Intelligence</li> <li>• Big data</li> <li>• Dashboard</li> </ul>			
<b>Tags for views</b>	<b>Knowledge Domain</b>  6. Data	<b>EN16234-1 e-CF area(s)</b>  D. ENABLE E. MANAGE	<b>EN16234-1 e-CF Competence(s)</b>  D.7. Data Science and Analytics E.1. Forecast Development	<b>ICT Professional Role Profile(s) CWA16458-1</b>  Data Scientist Role (27) Data Specialist Role (28)
<b>Base Knowledge</b>	<p>ICT professionals specialised in this field should have advanced knowledge in the following key topics:</p> <ul style="list-style-type: none"> <li>• Statistical methods for data analysis</li> <li>• Machine learning</li> <li>• Data Mining</li> <li>• Prescriptive and Predictive Analytics</li> <li>• Modeling, simulation and optimisation</li> </ul>			
<b>Specialised Knowledge</b>	More in-depth knowledge of Data Analytics is further articulated in specialised BoKs and standards.			
<b>References</b>	<ul style="list-style-type: none"> <li>• Edison Data Science Framework</li> <li>• DMBOK</li> </ul>			

UNIT NAME	DATA COMMUNICATION (7)			
<b>Unit description</b>	The Knowledge unit Data Communication contains knowledge about the transfer of data from one place another of between participating parties for storage and processing by computers to enable the movement of electronic data between two or more network nodes.			
<b>Common Knowledge</b>	<p>All ICT professionals should understand the fundamentals of Data Communication as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics:</p> <ul style="list-style-type: none"> <li>• Message</li> <li>• Sender/Receiver</li> <li>• Transmission medium</li> </ul>			
<b>Tags for views</b>	<b>Knowledge Domain</b>  4. Networks	<b>EN16234-1 e-CF area(s)</b>  C. RUN	<b>EN16234-1 e-CF Competence(s)</b>  C.2. Change Support C.3 Service Delivery C.4 Problem Management	<b>ICT Professional Role Profile(s) CWA16458-1</b>  Technical Specialist Role (22)
<b>Base Knowledge</b>	<p>ICT professionals specialised in this field should have advanced knowledge in the following key topics:</p> <ul style="list-style-type: none"> <li>• Radio transmission e.g. Radio, Cable</li> <li>• Infrared</li> <li>• Fiber optics</li> <li>• Cable technology e.g. STP, UTP, FTP</li> <li>• Line technology e.g. ADSL, ISDN</li> <li>• Cable types e.g. COAX</li> </ul>			
<b>Specialised Knowledge</b>	More in-depth knowledge of Data Communication is further articulated in specialised BoKs and standards.			
<b>References</b>	Supplier specific			

UNIT NAME	DATA MANAGEMENT (8)			
<b>Unit description</b>	The Knowledge unit Data Management contains knowledge about developing and implement data management strategies for data collection, storage, preservation, and availability for further processing to enable value creation from the data.			
<b>Common Knowledge</b>	<p>All ICT professionals should understand the fundamentals of Data Management as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics:</p> <ul style="list-style-type: none"> <li>• File organisation</li> <li>• Documentation</li> <li>• Storage and backup</li> </ul>			
<b>Tags for views</b>	<b>Knowledge Domain</b>  6. Data	<b>EN16234-1 e-CF area(s)</b>  D. MANAGE E. ENABLE	<b>EN16234-1 e-CF Competence(s)</b>  D.7. Data Science and Analytics E.9. IS Governance	<b>ICT Professional Role Profile(s) CWA16458-1</b>  Data Administrator Role (5) Data Scientist Role (27) Data Analyst Role (28)
<b>Base Knowledge</b>	<p>ICT professionals specialised in this field should have advanced knowledge in the following key topics:</p> <ul style="list-style-type: none"> <li>• Data management systems</li> <li>• Data management infrastructures</li> <li>• Data governance</li> <li>• Big data</li> <li>• Digital libraries and archives</li> </ul>			
<b>Specialised Knowledge</b>	More in-depth knowledge of Data Management is further articulated in specialised BoKs and standards.			
<b>References</b>	<ul style="list-style-type: none"> <li>• Edison Data Science Framework</li> <li>• DMBOK</li> </ul>			

UNIT NAME	DIGITALISATION (9)			
<b>Unit description</b>	The Digitalisation knowledge unit knowledge related to the use of digital technologies and digital data to improve business processes and/or change business models to provide new revenue streams and value-adding opportunities. Digitalisation enables change in how organisations and society function through the application of new technologies. Within organisations this requires a digital strategy or a digital transformation.			
<b>Common Knowledge</b>	<p>All ICT professionals should understand the fundamentals of digitalisation as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics:</p> <ul style="list-style-type: none"> <li>• Difference between digitalisation, digital transformation and digital strategy</li> <li>• Main technologies that drive digitalisation (e.g. A.I., RPA)</li> <li>• Application areas (e.g. FinTech, RegTech)</li> </ul>			
<b>Tags for views</b>	<b>Knowledge Domain</b>  7. Business	<b>EN16234-1 e-CF area(s)</b>  A. PLAN E. MANAGE	<b>EN16234-1 e-CF Competence(s)</b>  A.1. Information Systems and Business Strategy Alignment A.7. Technology Trend Monitoring A.9. Innovating E.7. Business Change Management	<b>ICT Professional Role Profile(s) CWA16458-1</b>  Chief Information Officer Role (4) Digital Consultant Role (9) Digital Transformation Leader Role (25)
<b>Base Knowledge</b>	<p>ICT professionals specialising in this field should have knowledge that includes the following topics:</p> <ul style="list-style-type: none"> <li>• Digital business models</li> <li>• Methodologies for digital transformation projects (e.g. DevOps)</li> <li>• Industry 4.0</li> <li>• Technologies used in digitalization (e.g. robotics, RPA, A.I., machine learning, Blockchain, IoT, XR, VR, AR, MR)</li> </ul>			
<b>Specialised Knowledge</b>	More in-depth knowledge of digitalisation is further articulated in specialised standards.			
<b>References</b>	<ul style="list-style-type: none"> <li>• IEEE Standards for Advanced Manufacturing, e.g. IEEE 2755, 1589</li> <li>• ISO Blockchain standards, e.g. ISO 22739</li> <li>• ISO/IEC IoT standards, e.g. ISO/IEC 21823, 30141, 27030</li> <li>• ISO/IEC A.I standards, e.g. ISO/IEC 23053, 22989, 24027, 24368, 42001</li> </ul>			

UNIT NAME	DOCUMENTATION (10)			
<b>Unit description</b>	The Documentation Knowledge Unit contains knowledge about the creation of pieces of written, printed, or electronic matter that provides information or are used as an official record. It can also include the instructions, comments, and information for using a particular piece or system of computer software or hardware.			
<b>Common Knowledge</b>	All ICT professionals should understand the fundamentals of the Documentation Knowledge Unit as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics: <ul style="list-style-type: none"> <li>• Role of documents in key processes</li> <li>• Document retrieval</li> </ul>			
<b>Tags for views</b>	<b>Knowledge Domain</b>  7. Business	<b>EN16234-1 e-CF area(s)</b>  A. PLAN B. BUILD	<b>EN16234-1 e-CF Competence(s)</b>  B.5. Documentation Production A.4. Product / Service Planning	<b>ICT Professional Role Profile(s) CWA16458-1</b>  Developer Role (6)
<b>Base Knowledge</b>	ICT professionals specialising in this field should have knowledge that includes the following topics: <ul style="list-style-type: none"> <li>• Organisational and legal documentation requirements</li> <li>• Documentation review and editing methods</li> <li>• Documentation quality standards</li> <li>• Visual communication methods</li> <li>• Version management</li> <li>• Content management systems</li> <li>• Documentation, information. content management standards</li> <li>• Corporate standards for publications</li> <li>• Document templates</li> </ul>			
<b>Specialised Knowledge</b>	More in-depth knowledge of Documentation is further articulated in specialised BoKs and standards.			
<b>References</b>	<ul style="list-style-type: none"> <li>• ISO 15489 Information and documentation -- Records management. 2016</li> <li>• ISO 30300:2011 Information and Documentation – Management Systems for Records – Fundamentals and Vocabulary</li> <li>• <a href="https://www.arma.org/page/Standards">https://www.arma.org/page/Standards</a></li> </ul>			

UNIT NAME	ENTERPRISE ARCHITECTURE (11)			
<b>Unit description</b>	The Enterprise Architecture (EA) knowledge unit concerns knowledge about the arrangement of physical components, logical relationships, and human interactions of an enterprise and its governing principles such as plans, designs and controls for the realisation, integration and evolution of this enterprise and for the execution of organisational strategies. Enterprise Architecture practice underpins the organisations objective to implement IT projects, infrastructures and address policies, current, transitional and through to future states, to achieve organisational goals.			
<b>Common knowledge</b>	All ICT professionals should understand the fundamentals of Enterprise Architecture as articulated in the unit description. Each ICT Professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics: <ul style="list-style-type: none"> <li>• Basic principles of Enterprise Architecture</li> <li>• The existence of various models</li> <li>• ICT components, software and hardware as part of the overall EA</li> </ul>			
<b>Tags for views</b>	<b>Knowledge Domain</b>  3. Architecture	<b>EN16234-1 e-CF area(s)</b>  A. PLAN	<b>EN16234-1 e-CF Competence(s)</b>  A.1. Information Systems and Business Strategy Alignment A.5. Architecture Design	<b>ICT Professional Role Profile(s) CWA16458-1</b>  Business Analyst (2) Enterprise Architect (8) Systems Architect (21)
<b>Base Knowledge</b>	ICT professionals specialising in this field should have knowledge that includes the following topics: <ul style="list-style-type: none"> <li>• Enterprise Architecture frameworks and models</li> <li>• Processes for developing enterprise architecture</li> <li>• Modelling methods (e.g. BPM)</li> <li>• Architecture modelling tool</li> </ul>			
<b>Specialised Knowledge</b>	More in-depth knowledge of Enterprise Architecture is further articulated in specialised BoKs and standards.			
<b>References</b>	<ul style="list-style-type: none"> <li>• ISO /IEC/IEEE 42020 <a href="https://www.iso.org/standard/68982.html">https://www.iso.org/standard/68982.html</a></li> <li>• ISO 15704</li> <li>• The Enterorise Architecture Body of Knowledge (EABok®) (EABOK Consortium) <a href="https://eabok.org">https://eabok.org</a></li> <li>• Mitre Guide to the (evolving) enterprise architecture body of knowledge <a href="https://www.mitre.org/publications/technical-papers/guide-to-the-evolving-enterprise-architecture-body-of-knowledge">https://www.mitre.org/publications/technical-papers/guide-to-the-evolving-enterprise-architecture-body-of-knowledge</a></li> <li>• TOGAF</li> <li>• Zachman</li> <li>• Gartner</li> <li>• GERAM</li> </ul>			

UNIT NAME	ETHICS [T2] (12)			
<b>Unit description</b>	<p>The Ethics knowledge unit concerns procedures, values and practices that govern ICT and its related disciplines that avoid damage to or violation of integrity, moral values or the fundamental beliefs of an individual, organisation or humanity.</p> <p>Ethics is a transversal aspect relevant to all ICT professional activities.</p>			
<b>Common knowledge</b>	<p>This unit incorporates cross-cutting knowledge directly related to the e-CF transversal aspect, 'T2 - Ethics'. All ICT professionals should understand the fundamentals of ethics as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics:</p> <ul style="list-style-type: none"> <li>Principles of professional ethics and their application as an individual</li> <li>Code of Ethics within their organisation and/or a professional body</li> <li>Implications of ethical principles for the general public, clients and employers</li> </ul>			
<b>Tags for views</b>	<b>Knowledge Domain</b>  1. Transversal knowledge	<b>EN16234-1 e-CF area(s)</b>  A. PLAN D. ENABLE E. MANAGE	<b>EN16234-1 Competence(s)</b>  A.3. Business Plan Development D.7. <b>Base Knowledge</b>	<p>ICT professionals specialising in this field should have knowledge that includes ethical theories and methods of education and implementation of ethics into the organizations culture and processes, including the following topics:</p> <ul style="list-style-type: none"> <li>Methods of integrating ethics into practices, processes.</li> <li>Provoking good practice, going beyond mere compliance</li> <li>Enabling the implementation of procedures and monitoring of progress.</li> <li>Training and coaching methods to encourage staff.</li> </ul>			
<b>Specialised Knowledge</b>	<p>More in-depth knowledge of Ethics is further articulated in specialised BoKs and standards.</p>			
<b>References</b>	<ul style="list-style-type: none"> <li>European Professional Ethics Framework for the ICT Profession <a href="#">Link to be provided</a>, (the framework will enable the concepts to be implemented and integrated at individual professional and organizational level)</li> <li>ACM Code of Ethics <a href="https://www.acm.org/code-of-ethics">https://www.acm.org/code-of-ethics</a></li> <li>Major link: concepts and also integration. Fill in more detail of key concepts.</li> </ul>			

UNIT NAME	ICT GOVERNANCE (13)			
<b>Unit description</b>	The ICT governance knowledge unit concerns knowledge relating to evaluation, direction, and monitoring of the current and future application of an organisation's IT resources in support of strategic objectives. ICT governance is part of the organisations overall governance strategy and is aimed at improving the overall management of IT and deriving improved value from investment in information and technology.			
<b>Common knowledge</b>	All ICT professionals should understand the fundamentals of ICT governance as articulated in the unit description. Each ICT Professional should be aware of the relevance and context of this subject to ICT in the organisation including the following topics: <ul style="list-style-type: none"> <li>• Basic principles of ICT Governance</li> <li>• Understanding personal role within GDPR compliance</li> </ul>

UNIT NAME	ICT AND SOCIETY (14)			
<b>Unit description</b>	The knowledge unit ICT and society concerns knowledge about digital policy at a societal level and the potential ethical, social and economic implications (positive and negative) of ICT. It also concerns the role of the organisation in society in terms of corporate social responsibility.			
<b>Common Knowledge</b>	<p>All ICT professionals should understand the fundamentals of ICT and Society as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation and wider society, including the following topics:</p> <ul style="list-style-type: none"> <li>• ICT impact in society</li> <li>• Concepts describing societal changes related to ICT, e.g. globalisation, information society, networked economy, information revolution, digital world</li> <li>• Market trends and needs related to IT</li> <li>• Approaches/ Methods for regulating and monitoring impact</li> </ul>

UNIT NAME	ICT LEGAL ISSUES [T3] (17)			
<b>Unit description</b>	<p>The ICT legal issues unit concerns legislation directly or indirectly relevant to either ICT infrastructure, ICT applications, data management or information management. ICT professionals must know and comply with national and international law as it applies to their activities when designing, building, maintaining, adapting, managing and operating computers and networks. Furthermore, they must know the legal restrictions applicable to their management or use of data and information.</p> <p>ICT Legal issues is a transversal aspect relevant to all ICT professional activities.</p>			
<b>Common Knowledge</b>	<p>This unit incorporates cross-cutting knowledge directly related to e-CF transversal aspect, 'T3 – ICT legal issues'. All ICT professionals should understand the fundamentals of ICT legal issues as articulated in the unit description. Each ICT professional should understand the relevance and context of this subject including the following topics:</p> <ul style="list-style-type: none"> <li>• Personal legal obligations</li> <li>• Basic understanding of areas of work covered by legal statutes</li> <li>• Use of data</li> <li>• Legislation relevant to health and safety</li> </ul>

UNIT NAME	ICT PROJECT MANAGEMENT (18)			
<b>Unit description</b>	The ICT Project management knowledge unit contains knowledge related to the application of methods, tools, techniques and competences to a project which is defined as a temporary endeavour undertaken to create a unique product, service, or outcome. This unit includes knowledge of the various phases of the project life cycle and subsequent integration.			
<b>Common Knowledge</b>	All ICT professionals should understand the fundamentals of ICT Project management as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics: <ul style="list-style-type: none"> <li>• Principles of project-based work</li> <li>• General ICT project methods</li> <li>• Project life cycle and phases</li> </ul>

UNIT NAME	ICT Quality (19)			
<b>Unit description</b>	The ICT Quality knowledge unit contains knowledge about the quality of ICT objects, such as products, services, processes, persons, organisation, systems, and resources. The quality of these objects depends on the degree to which the characteristics fulfil implied or obligatory needs or expectations. It also includes knowledge related to quality management, being the coordination of activities with regard to the quality of objects.			
<b>Common Knowledge</b>	All ICT professionals should understand the fundamentals of quality management as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics: <ul style="list-style-type: none"> <li>• Importance of quality</li> <li>• Quality in use and product quality</li> <li>• Widely used quality models</li> </ul>

UNIT NAME	ICT RISK MANAGEMENT (20)			
<b>Unit description</b>	The ICT risk management knowledge unit contains knowledge about the identification, assessment and management of the vulnerabilities to and potential impact of ICT risks to an organization. It includes knowledge of strategies, policies and methods to prevent, reduce and mitigate the negative impacts of ICT failure.			
<b>Common Knowledge</b>	<p>All ICT professionals should understand the fundamentals of the ICT Risk Management Knowledge Unit as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics:</p> <ul style="list-style-type: none"> <li>• Impact of ICT risks</li> <li>• Mitigating methods</li> <li>• Professional Individual Risk Mitigation Responsibilities</li> </ul>

UNIT NAME	KNOWLEDGE AND INFORMATION MANAGEMENT (25)			
<b>Unit description</b>	The Knowledge and Information Management Knowledge Unit concerns the identification, capture, organisation, analysis, sharing, and exploitation of knowledge and information to improve organisational performance. Its scope includes explicit knowledge and information i.e. representations that can be stored and analysed within knowledge or information systems but also the development and management of tacit knowledge and information, which is within people. An important part of knowledge and information management is developing the capacity to exploit and use knowledge to meet an organisation's strategic objectives through ensuring that KM and IM strategy enables organisational strategy.			
<b>Common Knowledge</b>	All ICT professionals should understand the fundamentals of the Knowledge and Information Management Knowledge Unit as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics: <ul style="list-style-type: none"> <li>Information Management systems</li> <li>Knowledge requirements to support work activities</li> </ul>

UNIT NAME	LEADERSHIP (26)			
<b>Unit description</b>	The Leadership knowledge unit concerns knowledge related to the guidance and direction of others towards a common goal. The unit includes supervision, motivation and work planning for individuals or teams. It encompasses knowledge about methods and techniques for coaching, conflict resolution, delegation and collaboration.			
<b>Common Knowledge</b>	<p>All ICT professionals should understand the fundamentals of leadership as articulated in the unit description. Each ICT Professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics:</p> <ul style="list-style-type: none"> <li>• The organisations management structure</li> <li>• Personal development requirements</li> <li>• Participation in performance measurement systems</li> </ul>

UNIT NAME	NETWORKS AND NETWORK SERVICES (27)			
<b>Unit description</b>	The Knowledge unit Networks and Network Services knowledge contains knowledge about the design, deployment and administration of networks including the assessment and judgement of which networks are suitable to share resources and communication using different network types like Wide Area Network, Local Area Network and Wireless LAN.			
<b>Common Knowledge</b>	All ICT professionals should understand the fundamentals of Networks and Network Services as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics: <ul style="list-style-type: none"> <li>• Topologies (Point to point, Ring, Star, mesh)</li> </ul>			
<b>Tags for views</b>	<b>Knowledge Domain</b>  4. Networks	<b>EN16234-1 e-CF area (s)</b>  B. BUILD C. RUN	<b>EN16234-1 e-CF Competence(s)</b>  B.2. Component Integration B.4. Solution Deployment	<b>ICT Professional Role Profile(s) CWA16458-1</b>  Network Specialist Role (14)
<b>Base Knowledge</b>	ICT professionals specialised in this field should have advanced knowledge in the following topics: <ul style="list-style-type: none"> <li>• Network types e.g. WAN, LAN, WLAN</li> <li>• Network usage e.g. Ethernet, IP, Satcom, ISO layer model</li> <li>• Network capacity e.g. 802.3x, DWDM</li> <li>• Network connections e.g. Optical fiber, UTP, WAP</li> <li>• Network components e.g. Switches, Routers, Gateways</li> <li>• Network security protocols e.g. 802.1X</li> </ul>			
<b>Specialised Knowledge</b>	More in-depth knowledge of Networks and Network Services is further articulated in specialised BoKs and standards			
<b>References</b>	<ul style="list-style-type: none"> <li>• IEEE 802.1Q</li> <li>• OSI Model</li> <li>• CompTIA Network+</li> <li>• Supplier specific</li> </ul>			

UNIT NAME	ORGANISATION PRINCIPLES (28)			
<b>Unit description</b>	The Organisation principles knowledge unit concerns knowledge related to organisations and their structures, in general. It is about the concept of organising and of the organisation of key elements such as structure, culture, strategy, coordinating mechanisms and coordination of activities. It also includes the aspect of organisational change.			
<b>Common Knowledge</b>	All ICT professionals should understand the fundamentals of organisation principles as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics: <ul style="list-style-type: none"> <li>• Typologies of organisation (e.g. Mintzberg)</li> <li>• Concept of organisational culture</li> <li>• Basic idea of management functions, actions and roles</li> </ul>			
<b>Tags for views</b>	<b>Knowledge Domain(s)</b>  7. Business	<b>EN16234-1 e-CF area(s)</b>  A. PLAN E. <b>Base Knowledge</b>	ICT professionals specialising in this field should have knowledge that includes the following topics: <ul style="list-style-type: none"> <li>• Principles and theories of organising</li> <li>• Forms of interorganisational collaboration (e.g. licensing agreement, technical cooperation, joint venture, subcontracting, etc.)</li> <li>• Culture models and values</li> <li>• Business strategy models and techniques</li> <li>• Supply chain</li> <li>• Organisational change</li> </ul>			
<b>Specialised Knowledge</b>	More in-depth knowledge of organisation principles is further articulated in specialised BoKs, theory, frameworks, and models.			
<b>References</b>	<ul style="list-style-type: none"> <li>• Strategic Planning and Strategic Management Body of Knowledge (ASP) <a href="https://www.strategyassociation.org/store/ViewProduct.aspx?id=4660938">https://www.strategyassociation.org/store/ViewProduct.aspx?id=4660938</a></li> <li>• Configuration theory (Mintzberg)</li> <li>• Business Model Canvas</li> <li>• Theories of Taylor, Fayol, Weber, Human relations theory, Systems theory</li> <li>• Competing Values Framework</li> <li>• Iceberg model</li> </ul>			

UNIT NAME	PRIVACY [T4] (29)			
<b>Unit description</b>	<p>The Privacy knowledge unit contains knowledge about data privacy, also known as information privacy. It concerns decisions regarding data sharing with third parties. The importance of protecting data privacy is underlined by the introduction of the European General Data Protection Regulation (GDPR) law on data protection and privacy for all individuals.</p> <p>Privacy is a transversal aspect relevant to all ICT professional activities.</p>			
<b>Common Knowledge</b>	<p>This unit incorporates cross-cutting knowledge directly related to the e-CF transversal aspect, 'T4 – Privacy'. All ICT professionals should understand the fundamentals of privacy as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation and wider society, including the following topics:</p> <ul style="list-style-type: none"> <li>• An understanding of data protection as a fundamental right</li> <li>• The general principles and regulations of privacy and the reasons for ensuring privacy</li> <li>• General methods for generating and managing protected data</li> </ul>			
<b>Tags for views</b>	<b>Knowledge Domain</b>  1. Transversal knowledge	<b>EN16234-1 e-CF area(s)</b>  D. ENABLE E. MANAGE	<b>EN16234-1 e-CF Competence(s)</b>  D.7. Data Science and Analytics D.10. UNIT NAME	PROBLEM SOLVING (30)			
<b>Unit description</b>	The problem solving knowledge unit contains concerns knowledge related to methods of problem identification, interpretation and analysis for the purpose of drawing conclusions and making decisions. It includes inductive and deductive reasoning, evaluation and analysis.			
<b>Common Knowledge</b>	All ICT professionals need a basic understanding of Problem Solving as articulated in the unit description. Each ICT professional should understand the relevance and context of this subject to the organisation, including the following topics: <ul style="list-style-type: none"> <li>• Problem identification</li> <li>• Problem description</li> <li>• Role of problem solving in work activities</li> </ul>			
<b>Tags for views</b>	<b>Knowledge Domain</b>  2. Behavioural knowledge	<b>EN16234-1 e-CF area(s)</b>  B. BUILD C. RUN	<b>EN16234-1 e-CF Competence(s)</b>  C.4. Problem Management B.4. Solution Deployment	<b>ICT Professional Role Profile(s) CWA16458-1</b>  Service Support Role (17) ICT Operations Manager Role (10)
<b>Base Knowledge</b>	ICT professionals specialising in this field should have knowledge that includes the following topics: <ul style="list-style-type: none"> <li>• Identification problem (e.g. root cause, trouble shooting)</li> <li>• Describing problem (e.g. alternatives, solution evaluation)</li> <li>• Quantify problem (e.g. Impact analysis))</li> <li>• Inductive reasoning</li> <li>• Deductive reasoning</li> <li>• Systems thinking</li> <li>• Analytical methods</li> <li>• Solution evaluation</li> <li>• Investigative methods</li> <li>• Interpretation</li> <li>• Decision making based on best analysis</li> <li>• Critical situation escalation procedures</li> <li>• Troubleshooting processes and procedures</li> </ul>			
<b>Specialised Knowledge</b>	More in-depth knowledge of Problem Solving is further articulated in specialised BoKs and standards.

UNIT NAME	PROGRAMMING LANGUAGES (31)			
<b>Unit description</b>	The Knowledge unit Programming Languages is knowledge about a formal language used to write computer programs performing an algorithm with instructions producing output or control devices.			
<b>Common Knowledge</b>	<p>All ICT professionals should understand the fundamentals of Programming Languages as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics:</p> <ul style="list-style-type: none"> <li>• Control structures</li> <li>• Data structures</li> <li>• Syntax</li> <li>• Variables</li> </ul>

UNIT NAME	PROGRAMMING PRINCIPLES (32)			
<b>Unit description</b>	The Knowledge unit Programming Principles contains knowledge about the process of coding, testing, troubleshooting, debugging and maintaining a system to write good code.			
<b>Common Knowledge</b>	<p>All ICT professionals should understand the fundamentals of Programming Principles as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics:</p> <ul style="list-style-type: none"> <li>• Abstraction</li> <li>• Methodology</li> </ul>			
<b>Tags for views</b>	<b>Knowledge Domain</b>  5. Software	<b>EN16234-1 e-CF area (s)</b>  B. BUILD	<b>EN16234-1 e-CF Competence(s)</b>  A.6. Application Design B.1. Application Development	<b>ICT Professional Role Profile(s) CWA16458-1</b>  Developer Role (6)
<b>Base Knowledge</b>	<p>ICT professionals specialised in this field should have advanced knowledge in the following key topics:</p> <ul style="list-style-type: none"> <li>• Programming paradigm e.g. Procedural, Functional, Structured, Object oriented</li> <li>• Procedural e.g. Iteration, Modularization</li> <li>• Functional e.g. Recursion</li> <li>• Structured e.g. Structograms, Indentation, Goto</li> <li>• Object oriented e.g. Class, Inheritance, Subtyping</li> </ul>			
<b>Specialised Knowledge</b>	More in-depth knowledge of Programming Principles is further articulated in specialised BoKs and standards.			
<b>References</b>	<ul style="list-style-type: none"> <li>• Awaiting expert input</li> </ul>			

UNIT NAME	REQUIREMENTS ANALYSIS AND SPECIFICATIONS (33)			
<b>Unit description</b>	The Knowledge Requirements Analysis and Specifications Knowledge Unit contains knowledge about the capture of requirements, validation and the conversion of those requirements into effective requirements specifications for ICT systems.			
<b>Common Knowledge</b>	<p>All ICT professionals should understand the fundamentals of Requirements Analysis and Specifications as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics:</p> <ul style="list-style-type: none"> <li>• Stakeholder</li> <li>• Desk research</li> <li>• Facilitating</li> </ul>

UNIT NAME	SECURITY [T5] (34)			
<b>Unit description</b>	<p>The Security knowledge unit concerns knowledge related to the field of information security which is the practice of defending information from unauthorised access, use, disclosure, disruption, modification, perusal, inspection, recording or destruction. It also encompasses ICT security designed to prevent unauthorised access to computers, networks and data.</p> <p>The overarching goal of ICT security is to control access and maintain the confidentiality, integrity, and availability of sensitive information without inhibiting access by authorised users.</p> <p>Security is a transversal aspect relevant to all ICT professional activities.</p>			
<b>Common Knowledge</b>	<p>This unit incorporates cross-cutting knowledge directly related to the e-CF transversal aspect, 'T5 – Security'. All ICT professionals should understand the fundamentals of security as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics:</p> <ul style="list-style-type: none"> <li>• Information security principles and standards</li> <li>• Common threats, attacks, vulnerabilities, and their consequences</li> <li>• Common measures and controls</li> <li>• Confidentiality, integrity and availability of information</li> </ul>			
<b>Tags for views</b>	<p><b>Knowledge Domain</b></p> <p>1. Transversal knowledge</p>	<p><b>EN16234-1 e-CF area(s)</b></p> <p>D. ENABLE E. MANAGE</p>	<p><b>EN16234-1 e-CF Competence(s)</b></p> <p>D.1. UNIT NAME	SOFTWARE DESIGN (36)			
<b>Unit description</b>	The Knowledge unit Software Design contains knowledge about setting up a plan for a software application satisfying functional and non-functional requirements. It includes knowledge about evaluation of the trade-offs that need to be made like performance and resource consumption so that the application is optimised to the requirements.			
<b>Common Knowledge</b>	<p>All ICT professionals should understand the fundamentals of Software Design as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics:</p> <ul style="list-style-type: none"> <li>• Software design as activity in the software life cycle</li> <li>• Software requirements, functional and non-functional</li> <li>• General notion of structured design, object-oriented design and component-based design</li> </ul>

Application Development	<b>ICT Professional Role Profile(s) CWA16458-1</b>  Developer Role (6) Digital Media Specialist Role (7)
<b>Base Knowledge</b>	<p>ICT professionals specialised in this field should have advanced knowledge in the following topics:</p> <ul style="list-style-type: none"> <li>• Software design methodologies and frameworks</li> <li>• Software modules of suppliers</li> <li>• Difference between software architecture design and software detailed design</li> <li>• Data design, architecture design, interface design, procedural design</li> <li>• Software structure and architecture; components and interfaces</li> <li>• Software models</li> <li>• Software design principles, e.g. abstraction, coupling, encapsulation</li> <li>• User interface design</li> <li>• Software design tools</li> <li>• Software design quality analysis and evaluation</li> <li>• Metrics like performance calculations and resource consumption</li> </ul>			
<b>Specialised Knowledge</b>	More in-depth knowledge of Software Design is further articulated in specialised BoKs and standards.			
<b>References</b>	<ul style="list-style-type: none"> <li>• SWEBOK</li> <li>• IEEE 1016 Standard for Information Technology—Systems Design—Software Design Descriptions</li> </ul>			

UNIT NAME	SOURCING (37)			
<b>Unit description</b>	The Sourcing Knowledge Unit contains knowledge about how to manage the provision of ICT services and products. It includes knowledge on how to select, integrate, and manage ICT suppliers in line with sourcing and supplier management strategies to deliver organisational value, minimise risk, enable innovation and develop effective relationships.			
<b>Common Knowledge</b>	All ICT professionals should understand the fundamentals of the Sourcing Knowledge Unit as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics: <ul style="list-style-type: none"> <li>• Role of ICT suppliers to organisation</li> <li>• Relationship management with suppliers</li> </ul>

UNIT NAME	SUSTAINABILITY [T6] (38)			
<b>Unit description</b>	<p>The sustainability knowledge unit contains knowledge about minimising the environmental impact of ICT and also achieving broader sustainability goals influenced by ICT. Sustainability represents meeting organisational needs without compromising the future.</p> <p>Note the social justice aspects of sustainability are further covered in the KU ICT AND SOCIETY (13).</p>			
<b>Common Knowledge</b>	<p>The Sustainability Knowledge Unit incorporates cross-cutting knowledge directly related to the e-CF transversal aspect, 'T6 Sustainability'. All ICT professionals should understand the fundamentals of Sustainability as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation and wider society, including the following topics:</p> <ul style="list-style-type: none"> <li>• Environmental impact of ICT</li> <li>• Methods to mitigate impact</li> </ul>

It supersedes ISO 14001:2004.</li> </ul>			

UNIT NAME	SYSTEM ADMINISTRATION (39)			
<b>Unit description</b>	The system administration knowledge unit contains knowledge about the management, upkeep, and configuration of business computer systems with the purpose of providing a reliable, secure and efficient work environment. This includes monitoring systems for efficiency and security, coordination of access control methods and the development of recommendations for ICT policy and process improvements.			
<b>Common Knowledge</b>	All ICT professionals should understand the fundamentals of the system administration knowledge unit as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics: <ul style="list-style-type: none"> <li>• Security features of system</li> <li>• Role of system in supporting work activities</li> </ul>

UNIT NAME	SYSTEM SOFTWARE (40)			
<b>Unit description</b>	The Knowledge Unit System Software contains knowledge about software that manages and supports the operation and maintenance of the computer system and associated programs. It acts as intermediary between the user and the computer and between the application software and the computer system hardware.			
<b>Common Knowledge</b>	<p>All ICT professionals should understand the fundamentals of system software as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics:</p> <ul style="list-style-type: none"> <li>• Concept of software as a series of instructions</li> <li>• System software as one the major categories of software, besides application software</li> <li>• Role of system software</li> <li>• Categories of systems software and their different functions (operating systems, utility programs, development programs)</li> <li>• Examples of most widely used operating systems</li> </ul>

<b>Base Knowledge</b>	<p>ICT professionals specialised in this field should have advanced knowledge in the following key topics:</p> <ul style="list-style-type: none"> <li>• Categories of operating systems, e.g. personal operating systems, mainframe operating systems, server operating systems, network operating systems, multiprocessor operating systems, mobile operating systems, embedded operating systems</li> <li>• Common features, principles and architecture e.g. BIOS, booting, interrupts, memory management, file systems, device drivers, networking, security, I/O</li> <li>• Processing techniques for increased efficiency, e.g. multitasking, multithreading, multiprocessing</li> <li>• Principles of computer programming tools, e.g. compilers and linker</li> </ul>			
<b>Specialised Knowledge</b>	More in-depth knowledge of Operating Systems is further articulated in specialised BoKs and standards.			
<b>References</b>	<ul style="list-style-type: none"> <li>• Supplier specific</li> </ul>			

UNIT NAME	TESTING (41)			
<b>Unit description</b>	The testing knowledge unit contains knowledge about the systematic validation and verification of specific properties of test items, such as the functionality, reliability, usability or compliance of items, such as hardware, software or systems components to meet the predetermined criteria. This encompasses knowledge of all the testing related activities, including the planning, preparation, execution, reporting, and management of testing.			
<b>Common Knowledge</b>	All ICT professionals should understand the fundamentals of testing as articulated in the unit description. Each ICT professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics: <ul style="list-style-type: none"> <li>• The need for testing following technical intervention</li> <li>• Basic principles of testing</li> <li>• Verification of functionality</li> </ul>

UNIT NAME	USABILITY [T7] (42)			
<b>Unit description</b>	<p>The usability knowledge unit contains knowledge of the process for determining the needs of users at all stages of the life cycle for IT service and solution provision. The topic addresses the design and development of optimised functional human interfaces, in terms of learnability, operability and accessibility.</p> <p>Usability is a transversal aspect relevant to all ICT professional activities.</p>			
<b>Common Knowledge</b>	<p>This unit incorporates cross-cutting knowledge directly related to the e-CF transversal aspect, 'T7 - Usability'. All ICT professionals should understand the fundamentals of usability as articulated in the unit description. Each ICT professional should understand the relevance and context of this subject to ICT, including the following topics:</p> <ul style="list-style-type: none"> <li>• Recognition of usability issues</li> <li>• Relevance of usability in different environments</li> <li>• Understanding user experiences</li> </ul>			
<b>Tags for views</b>	<b>Knowledge Domain</b>  1. Transversal knowledge	<b>EN16234-1 e-CF area(s)</b>  A.PLAN B. BUILD	<b>EN16234-1 e-CF Competence(s)</b>  A.6. Application Design A.10. UNIT NAME	USER INTERFACE AND WEB DESIGN (43)			
<b>Unit description</b>	The User interface and web design knowledge unit concerns the design of software and hardware components that interact with the user and provide information and control to that user, such as the visuals and usability of websites or interactive applications hosted on computers, tablets and smart phones. This topic encompasses web development, user controls (buttons, gestures and voice) and user experience including, user feelings and behaviour.			
<b>Common Knowledge</b>	All ICT professionals should understand the fundamentals of user interface and web design as articulated in the unit description. Each ICT Professional should be aware of the relevance and context of this subject to ICT in the organisation, including the following topics: <ul style="list-style-type: none"> <li>• Basic principles of user interfaces</li> <li>• Types of common user input devices</li> <li>• Effectiveness and quality of interfaces</li> </ul>
